

# PROJECT REPORT

**FROM : K.M. & K.K. SAVJANI COLLEGE - VERAVAL**

## **College Campus Management System**

**By**

**GHANSHYAM VAJA (SPU ID : 2020022333)**

**UNDER GUIDENCE : PATHAK BHAVIK Sir**

**SUBMITTED To : BKNMU**

**Bachelor of Computer Application(Semester - 5)**

**Year of Submission : 2022 – 23**

THE VERAVAL EDUCATION SOCIETY

SHREE K. M. SAVJANI & SMT. K. K. SAVJANI

BBA / BCA COLLEGE  
VERAVAL

**CERTIFICATE**

This is to certify that

1. Mr./Kum. Ghamshyam b. raja.
2. Mr./Kum. \_\_\_\_\_
3. Mr./Kum. \_\_\_\_\_
4. Mr./Kum. \_\_\_\_\_

have diligently and satisfactorily completed the **Project Work** at  
BCA - Sem - 5 entitled

College Campus management System for the partial fulfillment of  
Semester

**BBA / BCA / PGDCA / DCS**

from **Bhakt Kavi Narsinh Mehta University, Junagadh** for the Semester  
Sem - 5 during the academic year 2022.23.

They are found to be of high academic standard. We wish their bright future.

Date : 07/09/2022

Place : Veraval

Principal

Examiner

# CERTIFICATE of ORIGINALITY

This is to certify that this Project Report entitled "**College Campus Management System**" submitted to **Bhakta Kavi Narsinh Mehta University** for **Bachelor in computer application - V (BCA - 5)**, is an original work carried out by **Mr. GHANSHYAM VAJA**.

**SPU ID : 2020022333** under the guidance of **PATHAK BHAVIK sir** matter embodie.

this project is a genuine work done by the student and has not been submitted whether to this University or any other university/Institute for the fulfillment of any course of study.

---

DR. JIGAR RAVAL Sir  
(Principal)

---

College Seal

---

PATHAK BHAVIK sir  
(Guide)

# ACKNOWLEDGEMENT

The satisfaction that accompanies that the successful completion of any task would be incomplete without the mention of people whose ceaseless cooperation made it possible, whose constant guidance and encouragement crown all efforts with success.

I am grateful to my **project guide : PATHAK BHAVIK Sir** and **Principal : Dr. JIGAR RAVAL sir** for the guidance, inspiration and constructive suggestions that helped me in the preparation of this project.

I am also thankful to my **colleagues** who have helped me in successful completion of the project.

**GHANSHYAM VAJA**  
(Student)

Prof. Vadher Vilash  
~~Vadher VS~~  
(Lab Incharge)

# 1. Phases of Web Development

**Web Development** refers to a term that includes all the processes involved in developing a web project or website. It contains the various phases such as planning, designing, testing, and launching of the web project. The web development process requires a team of experts responsible for implementing the different tasks needed to create a website.

The following figure is a graphical representation of the various Phases of Web Development.

The various stages that are needed in order to develop a web project in web development are as following:

## 1. Strategy:

The first step in the web development process for a developer is to make a strategy for developing a web page or web site. In the strategy phase, web developer has to done the following:

- Deciding goals and objectives
- Developing team
- Make the appropriate analysis associated with problem and review the analysis
- Formulate a list of tasks

- Proposal of project to web team for developing

## 2. Design and Specification:

After the strategy-making, the next step in the web development process is to develop a planned work. Web developer has to determine the schedule and the specifications. The tasks in this phase are as follows.

- Developing approach
- Planning of contents needed for use
- Making of rough design for project
- Making of final design from rough design, if there are no considerable modification in rough design.
- Frame a prototype of project for developing
- Test the prototype
- If prototype is accomplish, then go to next phase phase-3 otherwise repeat the phase 2 until prototype is accomplish.

## 3. Production of desired result:

In this phase of the web development process, the actual functional site is built. After the proper testing of the prototype, the developer has to work on developing the actual live web project. The actual live web project is built according to the requirements of the client. Web developer has to consider all the situations from the design phase to create all the features in the web project. This phase involves both front end development and back end development of the website. Front end development comprises of the writing codes with the **basic technologies like HTML, CSS, etc.** according to the web standards. It generally starts by developing the home page first and then other pages. Back end development is also completed in this phase by installing and configuring the content management systems, databases, and frameworks. After completing all the steps that were finalized in the strategy and design phase by

which the original website becomes functional, it is tested in the next phase.

#### 4. Testing and Maintenance:

Testing is an important phase in the web development process. Testing is performed by the developers and testers to ensure the client's requirements after completion of the web project. In this phase, quality assurance and browser compatibility issues of the website are checked. Testers test all the developed features and assure the validity of the written code. Various types of testing such as integration testing, regression testing, functional testing, smoke testing, load testing, and performance testing are performed in this phase by both testing and development teams. Testing can be performed manually or automatically on the basis of the type of testing and web projects. If desired and satisfactory results are not found, the proper actions for removing the bugs are taken.

#### 5. Registration with ISP:

After completion of the Testing and Maintenance and removing all the bugs from the project, the next step or phase is to register the web project with the regional ISP to make the web project legal. The web project is delivered to the client after uploading the website to a server. **File transfer protocol (FTP) is used to host the website to a hosting server.** The client has to select and decide the ISP which provides domain name registration and web hosting services. After setup of these accounts and registering with the ISP so that the web project gets an accurate domain space at the ISP server.

#### 6. Launch:

This is the last phase of the web development process. Project is launched after getting registered with ISP. after launching, web project is publicly accessed by the users of the **particular domain**. The tasks performed in the launch phase are as follows.

- Migration of data

- Launching of server
- Merging of code
- Redirecting domain name

## 2. Feasibility Study

- **What is Feasibility Study?**

As the name implies, a feasibility analysis is used to determine the viability of an idea, such as ensuring a project is legally and technically feasible as well as economically justifiable. It tells us whether a project is worth the investment—in some cases, a project may not be doable. There can be many reasons for this, including requiring too many resources, which not only prevents those resources from performing other tasks but also may cost more than an organization would earn back by taking on a project that isn't profitable.

- **Understanding of Feasibility Study :**

Project management is the process of planning, organizing, and managing resources to bring about the successful completion of specific project goals and objectives. A feasibility study is a preliminary exploration of a proposed project or undertaking to determine its merits and viability. A feasibility study aims to provide an independent assessment that examines all aspects of a proposed project, including technical, economic, financial, legal, and environmental considerations. This information then helps decision-makers determine whether or not to proceed with the project.

The feasibility study results can also be used to create a realistic project plan and budget. Without a feasibility study, it cannot be easy to know whether or not a proposed project is worth pursuing.

## • Types of Feasibility Study

- o **Technical Feasibility :** This assessment focuses on the technical resources available to the organization. It helps organizations determine whether the technical resources meet capacity and whether the technical team is capable of converting the ideas into working systems. Technical feasibility also involves the evaluation of the hardware, software, and other technical requirements of the proposed system. As an exaggerated example, an organization wouldn't want to try to put Star Trek's transporters in their building—currently, this project is not technically feasible.
- o **Economic Feasibility :** This assessment typically involves a cost/ benefits analysis of the project, helping organizations determine the viability, cost, and benefits associated with a project before financial resources are allocated. It also serves as an independent project assessment and enhances project credibility—helping decision-makers determine the positive economic benefits to the organization that the proposed project will provide.
- o **Legal Feasibility :** This assessment investigates whether any aspect of the proposed project conflicts with legal requirements like zoning laws, data protection acts or social media laws. Let's say an organization wants to construct a new office building in a specific location. A feasibility study might reveal the organization's ideal location isn't zoned for that type of business. That organization has just saved considerable time and effort by learning that their project was

not feasible right from the beginning.

- o **Operational Feasibility :** This assessment involves undertaking a study to analyze and determine whether—and how well—the organization's needs can be met by completing the project. Operational feasibility studies also examine how a project plan satisfies the requirements identified in the requirements analysis phase of system development.
- o **Prepare an Opening Day Balance Sheet :** The opening day balance sheet is a snapshot of the company's financial position at the beginning of the business venture. The purpose of the opening day balance sheet is to give an idea of the amount of money that the company has to work with and track its expenses and income as they occur. This information is vital to making sound business decisions. The opening day balance sheet will include the following:
  - Cash on hand
  - Accounts receivable
  - Inventory
  - Prepaid expenses
  - Fixed assets
  - Accounts payable
  - Notes payable
  - Long-term liabilities

- Share
- o **Review and Analyze All Data :** The feasibility study should include reviewing and analyzing all data relevant to the proposed project. The data collected should be verified against source documentation, and any discrepancies should be noted. The purpose of the feasibility study is to provide a basis for making a decision, and the data should be sufficient to support that decision.

The analysis should consider both the positive and negative aspects of the proposed project. The financial analysis should be thorough, and all assumptions should be documented. The risk assessment should identify any potential risks and mitigation strategies. The team assigned to the project should review the feasibility study and recommend the organization's leadership.

Organizational leadership should decide whether to proceed with the project based on the feasibility study's findings. If the project is approved, the organization should develop a project plan that includes a detailed budget and timeline

# 3. About Project

## • Used Technologies in this Project:

- **HTML**-> Used for Structuring the website
- **CSS** -> Used for Designing the website
- **Some JavaScript**
- **Server-Side Web Scripting Language : php 7.4(to deal with Database)**
- **Database : MySQL 5.7**
- **Developed on : 000Webhost - an online Web Hosting Platform provided by Hostinger**

## ▪ Detailed view about used Technologies

>HTML :

- o HTML stands for **Hyper Text Markup Language**
- o HTML is the standard markup language for creating Web pages

- o HTML describes the structure of a Web page
- o HTML consists of a series of elements
- o HTML elements tell the browser how to display the content
- o HTML elements label pieces of content such as "this is a heading", "this is a paragraph", "this is a link", etc.

## >CSS :

- o CSS stands for **Cascading Style Sheets**
- o CSS describes how HTML elements are to be displayed on screen, paper, or in other media
- o CSS saves a lot of work. It can control the layout of multiple web pages all at once
- o External stylesheets are stored in CSS files

## >JavaScript :

- o JavaScript is the most popular and widely used **client-side scripting language**.
- o Client-side scripting refers to scripts that run within your web browser.
- o JavaScript is designed to add interactivity and dynamic effects to the web pages by manipulating the content returned from a web server.

## >PHP (used for Server-Side Scripting):

- o PHP is an acronym for "PHP: Hypertext Preprocessor"
- o PHP is a widely-used, open source **Server-Side scripting language**
- o PHP scripts are executed on the server
- o PHP is free to download and use

## >MySQL Database :

- o MySQL is a **relational database management system**
- o MySQL is open-source
- o MySQL is **free**
- o MySQL is ideal for both small and large applications
- o MySQL is very fast, reliable, scalable, and easy to use
- o MySQL is cross-platform
- o MySQL is compliant with the ANSI SQL standard
- o MySQL was **first released in 1995**
- o MySQL is developed, distributed, and supported by Oracle Corporation
- o MySQL is named after **co-founder Monty Widenius's daughter: My**

## >000Webhost - an Online Hosting Platform

## 000webhost

Free web hosting tends to be so limited in capabilities and features that users must pay to get what they need.

However, **000webhost** is a **free website hosting solution** provided by **Hostinger** that provides an array of valuable features, including a website builder, WordPress support, and no ads. It Provides 300MB file Storage To Store Website Files, Users can upgrade to a paid plan to get even more features and support, but based on our reviews, **000webhost is the best free web hosting solution** for those who are truly on a tight budget.

## • Use of the above all technologies in Project

In my project, I have used **HTML** from the technologies mentioned above to give the basic structure to the website, then **CSS** has been used to give a good design to the HTML elements of the webpages in the website, then **Some JavaScript** has been used to make the website dynamic and **PHP** Language has been used for Server-Side Scripting so that Webpages can interact with the backend (Database). I have used **MySQL 5.7** Database to store the Data of Users (Principal, Faculty and Students) and the Operations performed on that Data and I have used **000Webhost** Hosting Platform Provided by Hostinger to present [this website](#) online.

<center><h1 class="title">About BCA Programme</h1>
<strong>Bachelor of Computer Application (BCA) <p>
(A Three Years Full Time Course of Bhakta Kavi Narsinh Mehta University)</strong>
</center>

<p><h4 class="para">The three-year full time BCA programme at Savjani College is a graduate programme, which produces skilled professionals for the dynamic and fast paced Information Technology industry. Our college had started the BCA programme from the academic year 1998 functioning as a Graduate Centre of Saurashtra University, to meet the industry demand for skilled technocrats.</h4></p>
<p><h4 class="para">Fast growing information technology and communication systems have become critical components of almost every company's strategic plan. Companies which want to take advantage of the new information technologies and communication systems require expert professionals, who can apply computer science principles to solve problems produced by the interface between business and technology. BCA Course is an undergraduate program where students are exposed to various areas of computer applications including the latest developments in the industry.</h4></p>
<p><h4 class="para"><span class="hl">Objective:</span> Bachelor of Computer Application (B.C.A.) provides a sound academic base which provides for an advanced career in Computer Applications. BCA graduates can start their career as programmers and rise to that of senior programmers.</h4></p>
<p><h4 class="para"><span class="hl">Program Structure:</span> The BCA Program is divided into 6 semesters spread over 3 years. About 7 courses are covered in each semester.</h4></p>
<p><h4 class="para"><span class="hl">Eligibility:</span> 10 + 2 Passed Student in any Stream (Science, Commerce, Arts with Mathematics).</h4></p>
<p><h4 class="para"><span class="hl">Class Timings:</span> Between 8:00 am to 12.00 pm </h4></p>

      <center><h1 class="title">About BBA Programme</h1>
      <strong>Bachelor of Business Administration (BBA) <p>
        (A Three Years Full Time Course of Bhakta Kavi Narsinh Mehta University)</strong>
      </center>
    </div>
    <p><h4 class="para">The Bachelor of Business Administration (BBA) degree imparts basic management and business skills to students. These skills form the foundation of their management careers. In today's competitive economy, a BBA course trains effective leaders of tomorrow and entrepreneurs. Students sometimes follow up a BBA degree with an MBA. Most of them choose to join the workforce straight after BBA.</h4></p>
    <p><h4 class="para">BBA programme is designed for those who aspire for a career in business whether as an entrepreneur or a professional. Both the content and pedagogy have been developed with this objective.</h4></p>
    <p><h4 class="para">The course curriculum of a three year BBA Course is so designed that it provides the students a basic understanding about Management skills and trains them in effective communication skills. The programme also inculcates entrepreneurship skills in students. With this kind of curriculum, students are better poised to explore various opportunities that they have in management profession. The course covers basic business economics, mathematics, accounting, computer fundamentals, management theory and practice, marketing management, knowledge about the country's economy, human resource management, financial management, business law, communication skills, personality development etc.</h4></p>
    <p><h4 class="para">The BBA Program is 3-year campus-based program designed to enhance the skills and competencies of talented and ambitious young aspirants. During the years of study, the students will obtain a broader perspective on the nuances of managing at a time of great change, and acquire the skills to lead teams and organizations to success in a globalized, competitive business environment.</h4></p>
    <p><h4 class="para"><span class="hi">Electives:</span> The students have the option to pursue the elective streams in Finance, Marketing, HRM and IT & Systems. Students have the flexibility in choosing their elective streams. The details will be provided in the Student Handbook.</h4></p>
    <p><h4 class="para"><span class="hi">Opportunities:</span> The BBA course aims at developing a student's intellectual ability, executive personality and managerial skills through an appropriate blending of business and general education. The BBA course assists the student in understanding and developing the unique leadership qualities required for successfully managing business functions, an organizational unit or an enterprise.</h4></p>
    <p><h4 class="para"><span class="hi">Class Timings:</span> Between 12:30 am to 5.00 pm </h4></p>

### About BCA Programme

#### Bachelor of Computer Application (BCA)

#### (A Three Years Full Time Course of Bhakta Kavi Narsinh Mehta University)

The three-year full time BCA programme at Savjani College is a graduate programme, which produces skilled professionals for the dynamic and fast paced Information Technology industry. Our college had started the BCA programme from the academic year 1998 functioning as a Graduate Centre of Saurashtra University, to meet the industry demand for skilled technocrats.

Fast growing information technology and communication systems have become critical components of almost every company's strategic plan. Companies which want to take advantage of the new information technologies and communication systems require expert professionals, who can apply computer science principles to solve problems produced by the interface between business and technology. BCA Course is an undergraduate program where students are exposed to various areas of computer applications including the latest developments in the industry.

**Objective:** Bachelor of Computer Application (B.C.A.) provides a sound academic base which provides for an advanced career in Computer Applications. BCA graduates can start their career as programmers and rise to that of senior programmers.

**Program Structure:** The BCA Program is divided into 6 semesters spread over 3 years. About 7 courses are covered in each semester.

**Eligibility:** 10 + 2 Passed Student in any Stream (Science, Commerce, Arts with Mathematics).

**Class Timings:** Between 8:00 am to 12.00 pm

## About BBA Programme

### **Bachelor of Business Administration (BBA)**

#### **(A Three Years Full Time Course of Bhakta Kavi Narsinh Mehta University)**

The Bachelor of Business Administration (BBA) degree imparts basic management and business skills to students. These skills form the foundation of their management careers. In today's competitive economy, a BBA course trains effective leaders of tomorrow and entrepreneurs. Students sometimes follow up a BBA degree with an MBA. Most of them choose to join the workforce straight after BBA.

BBA programme is designed for those who aspire for a career in business whether as an entrepreneur or a professional. Both the content and pedagogy have been developed with this objective.

The course curriculum of a three year BBA Course is so designed that it provides the students a basic understanding about Management skills and trains them in effective communication skills. The programme also inculcates entrepreneurship skills in students. With this kind of curriculum, students are better poised to explore various opportunities that they have in management profession. The course covers basic business economics, mathematics, accounting, computer fundamentals, management theory and practice, marketing management, knowledge about the country's economy, human resource management, financial management, business law, communication skills, personality development etc.

The BBA Program is 3-year campus-based program designed to enhance the skills and competencies of talented and ambitious young aspirants. During the years of study, the students will obtain a broader perspective on the nuances of managing at a time of great change, and acquire the skills to lead teams and organizations to success in a globalized, competitive business environment.

**Electives:** The students have the option to pursue the elective streams in Finance, Marketing, HRM and IT & Systems. Students have the flexibility in choosing their elective streams. The details will be provided in the Student Handbook.

**Opportunities:** The BBA course aims at developing a student's intellectual ability, executive personality and managerial skills through an appropriate blending of business and general education. The BBA course assists the student in understanding and developing the unique leadership qualities required for successfully managing business functions, an organizational unit or an enterprise.

**Class Timings:** Between 12:30 am to 5.00 pm

## Class Room

**Shri K.M.K.K.S. Savjani College** has modern Ten Lecture Halls (Class Rooms) and two Tutorial Class Rooms with modern audio-visual equipments. All the class-room / tutorial rooms are equipped with Audio-Visual System and CCTV Cameras with recording facilities.

## Computer Lab

Savjani College provides state of the art desktop computers to all its faculty members and staff. The Institute has **two computer labs with more than 100 computers** connected by a very fast and well-connected local area network (LAN) with **5 MBPS broadband internet connectivity**. The Institute through its campus wide network provides connectivity to its resources such as Library information, printing and file access, Internet and Mail Services. Institute has permitted to the students to use their computers and Internet services in the campus is **equipped with network access points** that enable the student to have access to all these resources. However, a student is expected to possess a network enabled PC to gain such access.

## Library

Library is in 120 Sq.M. area having a seating capacity for more than 60 students. In addition to the Reading Facilities in Library Premises, the Institute has special Reading cubical rooms spread over in 80 Sq.M for the serious reading. The library supports the teaching and research programmes of the Institute. Library has huge collection of text books, reference books and books of general reading, journals, periodicals, multimedia facilities, Working Papers and Fieldwork reports.

In addition to this, the library is equipped with facilities such as Multimedia.

**(i) Books :** Currently, Library houses around 12,000 books; in the disciplines of Management (2200 +), Computer Applications (2400 +), Cooperation and others 200.

**(ii) Multimedia PCs :** The Institute has 4 multimedia PCs in the Library for accessing of online journals and other reading available on various online resources.

**Electronic Material:** The Institute has more than 100 CDs/DVDs and 50 Video Recordings on various subjects related to Management, Computer Applications.

# 9. Testing Report

---

## Test Planning:

Like any project, the testing also should be driven by a plan. The test plan generates the report for the execution and tracking of the entire testing project.

## Preparing the test plan :

- What needs to be tested—the scope of testing, including clear identification of what will be tested & what will not be tested.
- How the testing is going to be performed – breaking down the testing into small and manageable tasks and identifying the strategies to be used for carrying out the tasks.
- Resource needed for testing
- The timelines by which the testing activities will be performed.
- Risks that may be faced in all of the above, with appropriate mitigation and contingency plans.

## Test Case Specification :

- Using the test plan as the basis, the testing team design test case specification which then becomes the basis for preparing for individual test cases.
- A test case is nothing but a series of steps executed on a product, using a predefined set of input data, expected to produce a pre-defined set of outputs, in a given environment.
- It describes “how” to implement those test cases
- Test case specifications are useful as it enlists the specification

details of the items.

## Details of each Specification:

Test Case Specification	Description
TEST CASE ID(TC_ID)	Unique ID to identify/report the bug if present in the functionality of software
Test Case Objective	The purpose of the test. The lists can be generated to perform intended task, for which software is developed. Results should always follow the test case objective
Pre-requisite	This can include environment setup, supporting software environment setup. for the project, or any fields in which user will give the input. So that test cases can be planned accordingly.
Steps	This includes steps to be performed to give the input to the system, so that system can perform its specified task and display the result accordingly. If automated testing is used, then, these steps are translated to the scripting language of the tool.
Input Data	The choice of input data will be depended on the test case itself and the technique followed in the test case. For e.g. equivalence partitioning, boundary value analysis etc.
Expected Result	It can be the user required output to be shown

Actual Result		This step should do a comparison of the expected and actual results to highlight any differences.		
Status		Whether expected results and actual result match, if it matches then PASS or else FAIL		

## TESTING Results:

TEST CASE ID(TC_ID)	Test Case Objective	Pre-requisite	Steps	Input Data	Expected Result	Actual Result	Status

			Reset Password.				
TC_15	Change Email	Web Browser, Internet, and (Principal or Faculty or Student Login)	1. Click on Change Email 2. Enter new Email 3. Click on Change Email.	Abcde1122@gm ail.com	Email Has been Changed Successfully.	Emaill Has been Changed Successful ly.	1 <sup>st</sup> Time: FAIL 2 <sup>nd</sup> Time: PASS
TC_!6	Check Results	Web Browser,Internet	1. Enter Valid SPU_ID 2. Click on Submit.	1212121286	Show result in Predefined Format	Show result in Predefined Format	1 <sup>st</sup> Time: FAIL 2 <sup>nd</sup> Time: PASS

# **10. Limitations**

---

The limitations of my website are **Storage Capacity** and **Limited No. of Email Sending**. My website runs on free hosting service which provides **300MB** of storage capacity so that no more data can be stored. So more facilities cannot be added. And **50 emails can be sent per day**, so there is a limitation in that too.

# **11. Future Enhancements**

---

In this website we can add :

- Clerk Desk
- Librarian Desk

We can build More Attractive UI(User Interface) using Frameworks Like Laravel, CackPHP, Symfony, FuelPHP, Fat-free Framework.

# 12. Bibliography

---

I have used HTML, CSS, some JavaScript and PHP (for Backend) to develop this website. And specifically for learning PHP I used the following material and Websites:

- [PHP Official Documentation](#)
- [StackOverflow](#)
- [GeeksForGeeks](#)
- [W3Schools](#)
- [JavaTPoint](#)

# 13. Reference

---

- [PHP Official Documentation](#)
- [StackOverflow](#)
- [GeeksForGeeks](#)
- [W3Schools](#)
- [JavaTPoint](#)

# ANDROID APPLICATION
